

Application Platform Services

DISCIPLINED APPROACH

Discipline in proven software rollout methodologies and technologies ensures successful results.

PLATFORM EXPERTISE

Nexus Services Teams have expertise integrating and deploying a wide variety of application platforms, including J2EE, JBoss, Websphere, Weblogic, .NET, Virtual Machines and Linux.

MOBILE EXPERTISE

Mobile application integration and deployment expertise across all major mobile operating systems.

NETWORK EXPERTISE

Proven experience testing and deploying applications across various wireless networks, such as UMTS, LTE, and WiMAX.

SUPERIOR TEAM

Nexus' team of project managers and engineers have years of experience working with application platform technologies and managing operations for leading companies worldwide.

Network operators, device vendors, and content providers are all rapidly building large scale application platforms to meet the growing demands of a mobile population. These platforms are intended to lower development costs, increase operational efficiencies, and speed time to market for new applications. While these platforms hold great promise, their integration and deployment present organizations with challenging needs for:

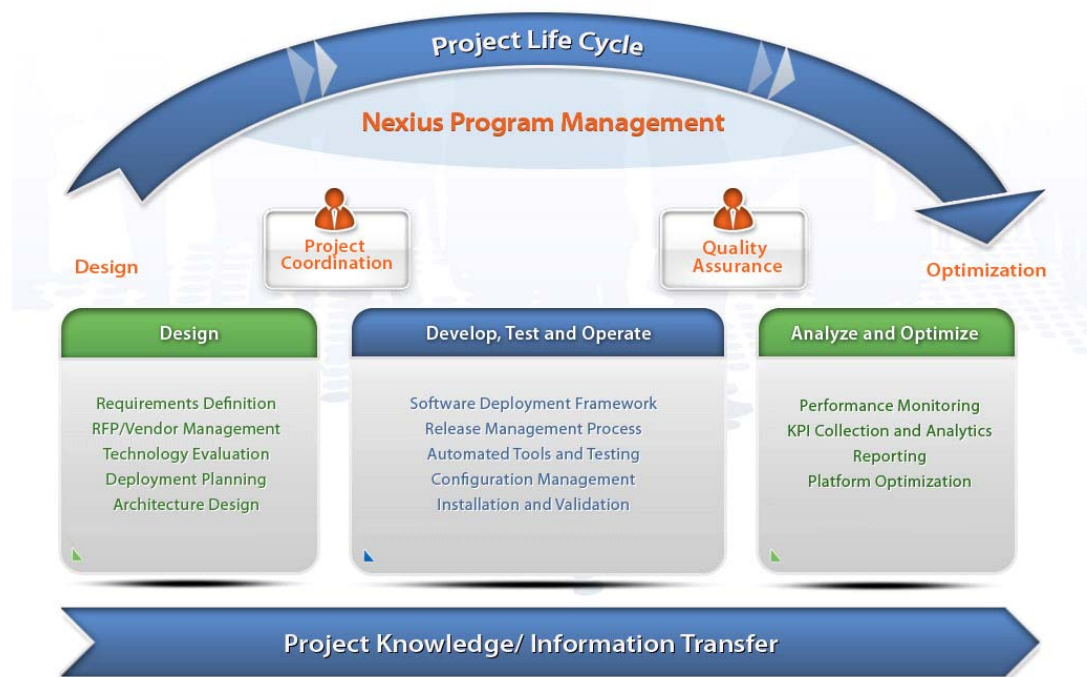

- Reliable release management
- Commercial integration across devices, networks, and OSS/BSS
- Automated testing tools for quality assurance
- Auditing, KPI monitoring, and analytics

Despite the importance of these issues, companies often lack the resources, experience, discipline, or subject matter expertise to resolve them before they result in critical platform roll out delays.

The Nexus Software Services team solves these challenges for many of today's leading companies. From defining platform requirements to implementing a common deployment framework, Nexus offers all of the services necessary to support application platform deployments at every stage of the project lifecycle.

Services for Every Stage of Your Application Platform Deployment

The Nexus Software Services team delivers a focused and proven approach to platform rollouts that speeds time to market for new applications. Our experience working with many of today's leading wireless carriers and operating systems makes us a trusted resource for companies deploying large-scale platforms.

Experienced Services Teams that Speed Time to Market for New Applications

- **Design** - Nexius offers services to support the initial application platform integration and deployment strategy. Our experienced teams utilize their extensive knowledge of platform launches to gather and write requirements, recommend platforms and supporting technologies, create project, program and deployment plans, and design the platform architecture. We examine your business and determine the requirements necessary to integrate the platform into your current workflows.
 - Requirements Definition
 - RFP/Vendor Management
 - Technology Evaluation
 - Deployment Planning
 - Architecture Design
- **Test, Deploy, and Operate** - Once the design and development for the platform is finalized, Nexius Services Teams can lead the testing, deployment and operations management. From easing the deployment process by implementing a software deployment framework to speeding time to market with automated testing tools, Nexius has the services necessary to successfully launch your platform initiatives. Our team of services experts delivers proven software release methodologies and deep technical knowledge to every Nexius customer project.
 - Software Deployment Framework
 - Release Management Process
 - Automated Tools and Testing
 - Configuration Management
 - Installation and Validation
- **Analyze and Optimize** - Following a successful platform launch, companies need to monitor performance to ensure the platform is meeting key quality standards. Nexius Services Teams collect and analyze key analytics to assess platform health and report findings to stakeholders. Nexius also makes recommendations on options for optimizing the platform to create a path for future-friendly growth.
 - Performance Monitoring
 - KPI Collection and Analytics
 - Reporting
 - Platform Optimization

Nexius Software Services delivers all the services you need to make the design, development, management, and reporting of application platform deployments easy and efficient. From speeding time to market for new applications to gaining increased control and visibility of your business, Nexius offers the expertise, insight and experience that the world's largest communications providers trust.

About Nexius

Nexius is the leader in delivering experienced wireless and network technology services to industries worldwide. The company's over 350 dedicated professionals serve as subject matter experts, providing Technology Strategy, Network Engineering Services, Network Deployment Services, and Software Services to many of today's leading organizations. Nexius is on a steady path of growth in the US and globally, ranking as the 103rd fastest growing business in America by Entrepreneur Magazine and in the Deloitte Technology Fast 50 and the Inc. 5000 lists.
